

News from the Stars :

OR, AN

EPHEMERIS

For the YEAR 1693.

WITH

Observations upon the *Eclipses*, *Solar*
Ingresses and *Configurations* of Heaven
happening therein.

being the First since the Bissextile, or
Leap-Year.

and from the *Creation* of the WORLD,
according to the best of *History*, 5642 years.

WHEREIN

you have an *Account* of many things about the
Heavenly Bodies, and their *Portents* in the
said YEAR.

BY WILLIAM ANDREWS, Student
in *Astrology*.

Deus in adjutorium.

L O N D O N,

Printed by W. and J. Wilde, for the Company
of STATIONERS, 1693.

The Six Ages of the WORLD, according to the Account of some Learned Men.

The 1st. is from the *Creation of the World* to the
Flood, and this is called by *St. Peter* the *Old*
World, 2. *Pet* 2. 5.

The 2d. is from the *Flood* to *Abraham*.

The 3d. from *Abraham* to *David*.

The 4th. from *David* to the *Captivity* } *St. Mark*
chap. 1.

The 5th. from the *Captivity* to *Christ*.

The 6th. is the time after *Christ*, called in ma-
ny places of the *Holy Scripture* the *last Age*, and
the *last of times*, as in *Heb*. chap. 1. v. 1.

Their *Lengths* according to none of the worst
Accounts, are thus, viz.

The first Age	_____	1656	} years.
The second	_____	422	
The third	_____	866	
The fourth	_____	448	
The fifth	_____	605	

The sixth and last hath so many years as are from
the Time of *Man's Redemption* until now : for hi-
therto this Age hath continued, and shall not be
ended until the last *Trumpet* be blown, and *Surgite*
mortui, venite ad Judicium ; Arise you dead, and
come to Judgment, be sounded in our ears. *Swan's*
Speculum Mundi, chap. 1. sect. 3.

Concerning this last Age, *Du Bartas* writes thus,
viz.

The last shall be the very resting day ;

Air shall be mute, the Waters Works shall stay :

The Earth her store, the Stars shall leave their measures,

The Sun his shine ; and in eternal Pleasures

We plung'd, in Heaven, shall aye solemnize all

The eternal Sabbaths endless Festival.

The

the *Oriental* and *Occidental*, rising and setting of
the 5 *Planets*, before, and after the *Sun* this present Year
1693.

Asurn is a *Morning-Star*, at the beginning of this
Year, and continueth so until the 30th. day of
May; then *He* becomes *Occidental*, and is an *Eve-*
ning-star until the 5th. day of *December*, and then
is a *Morning-Star* to the years end.

Jupiter is an *Evening-star* at the beginning of the
Year, and continueth so until the 13th. day of *June*,
then *He* becomes a *Morning-star*, and riseth before
the *Sun*, until the 29th. day of *December*, and then
becomes *Occidental*, and is an *Evening-star* again.

Mars is *Oriental*, and a *Morning-star* at the be-
ginning of the Year, and remaineth so all the year
long, until the 7th. day of *January* 1694.

Venus is *Oriental*, and a *Morning Star* at the
beginning of the Year, and abideth so until the 16th.
day of *June*, she then becomes an *Evening-Star*,
and so continueth unto the Year's end.

Mercury is *Occidental*, and an *Evening Star* at
the beginning of the Year, until the 13th. day of
January, then *He* is a *Morning Star*, to the 24th.
day of *March*; then *He* is an *Evening Star* again,
until the 11th. day of *May*; then he is a *Morning*
Star again, unto the 6th. day of *July*; then an
Evening Star again, to the 13th. day of *Septem-*
ber; then a *Morning Star* again, unto the 30th.
day of *October*, and then *He* becomes again an
Evening Star until the 28th. day of *December*; and
then *He* becomes again a *Morning-Star*.

Cæli enarrant Gloriam Dei.

The Use of the Two ensuing Tyde-Table

TO find the time of Full Sea, or High Water in any of those Places mentioned in the two ensuing Tyde Tables, you must observe, First, Age of the Moon, which you may easily find in the next following Table, wherein you have the Moon's Age every day throughout this year, 1693. and having therein found out the Moon's Age, according to those Directions mentioned for that purpose in the of the said Table; then have recourse unto the Tyde-Tables, and look for the place desired in Head of the said Tables, with the Age of Moon, in the Column under the Title of the Moon's Age, and in the Common Angle, or meeting those Lines in the Column under your Place, you have the time of High-water in hours and minutes.

Yet Note, That the Tydes do not always out exactly at the time found in these Tables, by reason of the Difference of the Moon's Latitude, High Winds, Land Floods, &c. which very often alter the Time; but this is the Common Rule, generally given, for the finding of them.

A TABLE of the Moon's Age every day throughout this Year, 1693. whereby, with the help of the ensuing Tyde-Tables, the time of High-water and full Tyde may be found in those Places there inserted.

January's Planetary Transactions, and Observations, 1693.

The	{	8 day at 6 in the morning <i>Jupiter</i>	} is with the ☾.
		21 day at 9 at night <i>Saturn</i>	
		23 day at 6 in the morning <i>Venus</i>	
		24 day at noon <i>Mercury</i>	
		24 day at 2 in the afternoon <i>Mars</i>	

Type of the
Moon's Eclipse
in this Month.

St. Luk. ch. 21. v. 25.

There shall be Signs in the Sun, and in the Moon, and in the Stars, &c.

ON the 12th. day of this Month will happen a Great and Total Eclipse of the Moon, in the Third Degree of Leo, which (if the Air be clear) will be visible in our Horizon: It will begin, about half an hour after 2 of the Clock in the Morning. The beginning of Total Darknest, will be about 35 minutes

after 3 of the Clock: The Middle or Greatest Obscuration, will be at 27 minutes past 4: The Moon will begin to receive her Light, about 20 minutes past 5, and the end thereof, will be about 24 minutes past 6 of the Clock in the Morning: The Total Duration, will be 3 hours, and 53 minutes: and the Digits Eclipsed 19 and 32 minutes. —

Jupiter now becomes Stationary, and Direct in Motion in *Gemini*: *Saturn* is in Conjunction with *Venus* in *Sagittary*: *Mercury* with the *Sun* in *Aquarius*. and with *Mars* in *Capri-*
corn; *Mercury* being then Retrograde. There is now also, a fine Aspect of the *Sun* and *Jupiter* in *Gemini*, and *Aqua-*
rius; and a Sextile of the *Sun* and *Saturn* in *Sagittary* and *Aquarius*. Various proceedings in several Parts of the World, and some Material Transactions in some Places draw nigh. The effects of the many Conjunctions of the Planets in November last, seem near manifestation. —

The Weather in this Month, will be now and then, much continuing to Snow, and Cold, and Windy very often. —

Febru-

1693.

February nath xxviii Days.

First Quarter, the 3 day, 56 minutes past 7 morning.

Full Moon, the 10 day, 55 minutes past 3 afternoon.

Last Quarter, the 17 day, 16 minutes past 8 morning.

New Moon, the 24 day, 53 minutes past 10 at night.

February's Planetary Transactions, and Observations, 1693.

The { 4 day at 3 in the afternoon *Jupiter*
18 day at 5 in the morning *Saturn*
22 day at 9 in the morning *Venus*
22 day at 3 in the afternoon *Mars*
22 day at 10 at night *Mercury* } is with the ☾.

Psalm 147. ver. 4.

He telleth the Number of the Stars: He calleth them all by their Names.

Mars is now come into *Aquarius*, and the Configurations of the Stars in this Month are these, viz. a Trine Aspect of *Jupiter* and *Mars*, of *Jupiter* and *Mercury*, and of *Jupiter* and *Venus*, in *Gemini* and *Aquarius*: a Conjunction of *Mars* and *Mercury* in *Aquarius*, a Quartile of the Sun and *Jupiter* in *Gemini*, and *Pisces*: a Sextile of *Saturn* and *Mercury*, *Saturn* and *Mars*, and *Saturn* and *Venus* in *Sagittary*, and *Aquarius*. These Aspects are of a mild, and serene Disposition for the most part; and so may their Effects be at this time. The Stars have now no very material portents; But the Effects of the Eclipse of the Moon in January past, may be expected now, or ere long to break forth in those Parts of the World, unto which the said Eclipse hath relation. — Discourses may be abroad, relating both unto Peace and War; and the present Consultations are tending thereunto: Some Countries being under inclinations to Peace, and others of a contrary nature: So that no great certainty appears at this time, as unto the publick concerns of some European Places, but Things stand somewhat in a dubious posture insundry of them. —

The Weather in this Month, seems to me to be for the most part seasonable, and moderate: tho' sometimes very high Winds, and sudden storms, both at Sea, and Land, will happen therein.

March

1693.

March hath xxxi Days.

First Quarter, the 5 day, 20 minutes past 2 morning.

Full Moon, the 12 day, 36 minutes past 1 morning.

Last Quarter, the 18 day, 12 minutes past 5 afternoon.

New Moon the 26 day, 5 minutes past 4 afternoon.

Jeremiah, chap. 10. ver. 12.

He hath made the Earth by his Power, he hath established the World by his Wisdom, and hath stretched out the Heavens by his Discretion.

THE Sun comes now to a *Quartile Aspect* of Saturn, at the beginning of this Month, in Sagittary and Pisces; and here is a *Conjunction* of Mars and Venus, in Aquarius, and of the Sun and Mercury in Aries: A *Quartile Aspect* of Jupiter and Mercury, Jupiter and Venus, and (at the Months end) of Jupiter and Mars, in Gemini, and Pisces: A *Quartile* of Saturn and Venus, in Sagittary, and Pisces: A *Sextile Aspect* of the Sun and Jupiter, and of Jupiter and Mercury in Aries and Gemini: A *Trine Aspect* of Saturn and Mercury, and of the Sun and Saturn (at the end of the Month) in Aries and Sagittary: and Mars now comes into Pisces, and Saturn becomes Retrograde, at the latter end of the Month. Some of these Configurations are of no great importance: The *Quartile* of the Sun and Saturn, at the beginning of the Month, and of Jupiter and Mars, at the end, are the most considerable, as unto the Signification of Mundane concerns. Many things of an active Nature, may be on foot in divers Parts of the World, and the undertakings of some Countries, may be now busily managed.

Cold Storms, and High Winds, often in this Month; and unconstant Weather.

April

1693.

April's Planetary Transactions, and Observations, 1693.

The { 13 day at 7 at night Saturn
21 day at 8 at night Mars
24 day at 5 in the morning Venus
26 day at 11 at night Mercury
28 day at 10 in the morning Jupiter } is with the ☾

Psalm 8. ver. 3 and 4.

When I consider thy Heavens, the work of thy
Fingers, the Moon, and the Stars which thou hast
ordained. What is Man that thou art mindful of
him, and the Son of Man that thou visitest him?

WE have in this Month of April, but four Mutual
Aspects of the Planets, and those are a Quartile
of Saturn and Mars, in Sagittary and Pisces: A Sextile of
Jupiter and Venus, in Aries and Gemini: A Trine of Saturn
and Venus, in Aries and Sagittary: And an Opposition of
Saturn and Jupiter, in the 21st. Degree of Gemini, and Sa-
gittary; Saturn being Retrograde, and Jupiter direct in Mo-
tion: And this is their third, and last Opposition in those
two Signs; and the last that I shall ever write off. —

Astrologers say, that a Quartile Aspect of Saturn and Mars
(as now) hath usually some rough Effects, and sometimes it
promotes Battles, Skirmishes, Land and Sea-fights, and un-
quiet doings in the World. Besides, now the Effects of the
Quartile of Jupiter and Mars, at the end of March past,
seem designed to operate; and the Effects of this present
third Opposition of Saturn and Jupiter, may be also confi-
derable. — Mars now comes into Aries. The motion of
Armies, Martial and Naval Discourses and proceedings.

Expect pretty hasty storms of Hail and Rain, sometimes
in this Month; with some violent Claps of Thunder in
some Places.

May

1693.

May hath xxxi Days.

First Quarter, the 3 day, 50 minutes past 3 morning.

Full Moon, the 9 day, 40 minutes past 5 afternoon.

Last Quarter, the 16 day, 2 minutes past 8 at night.

New Moon, the 24 day, 10 minutes past 11 at night.

 { 23 day at 4 in the afternoon *Venus* }

The Earth shall quake before them, the Heavens shall tremble, the Sun and the Moon shall be dark, and the Stars shall withdraw their shining, Joel 2. 10.

A Type of the Sun's Eclipse in this Month.

ON Friday the 23d day of this Month there will happen a small Eclipse of the Sun, which may be visible here in England. The beginning thereof will be about 13 minutes before noon, the visible Conjunction about 17 minutes past noon; and the end thereof about 47 minutes past noon. The duration will be an hour; and the Digits Eclipsed 2 and 34 minutes. Some

Tables make it but 29 minutes and 58 seconds; and some make it less; and some have affirmed that 'twill be a very great Eclipse, all which time will determine—

There is in this Month an Opposition of Saturn and Venus, and Saturn and Mercury in Gemini and Sagittary; a Conjunction of Jupiter with Venus, the Sun and Mercury: and of the Sun with Venus in Cancer, a little after the Sun coming into it—Many Things in agitation Northward and North-East from England. Sea-matters under Consideration. Various Undertakings in some places under Cancer; yet perhaps, peace by some people is much promoted, and a more moderate time may now appear in some places than formerly—

Many hasty storms in this Month, with Thunder and Lightning in some places, if not some sudden floods prejudicial to some people—

B 2

The { 4 day at 5 afternoon Saturn
18 day at 2 morning Mars
20 day at 8 at night Jupiter
23 day at 7 at night Venus
24 day at 7 morning Mercury
31 day at 11 at night Saturn } is with the Moon.

And God made two great Lights, the greater Light to rule the Day, and the lesser Light to rule the night: He made the Stars also, Gen. 1. 16.

UPON the 7th Day of this Month, about 10 of the Clock in the Morning, there will be an Eclipse of the Moon, in the 25 degree of Cancer; but the Moon being then under the Earth, it cannot be seen here in England.

Mars now comes into Gemini, and at this time there happens a Conjunction of the Sun and Mercury, in Cancer; a Sextile of Mars and Venus, in Taurus and Cancer; of Mars and Mercury and the Sun and Mars, in Gemini and Leo; a Conjunction of Venus and Mercury, in Leo; a Time of Saturn and Mercury, Saturn and Venus, and the Sun and Saturn, in Leo and Sagittary: And on the last Day of this Month, an Opposition of Saturn and Mars, in Gemini and Sagittary, Saturn being still Retrograde: And now the Effects of the small Eclipse of the Sun in June past, may be expected to appear Northward, and North-East--Or e'er long, may break forth in some Parts of the World concerned thereby. A Time of much Business, and variety of Action in some Countreys: The Soldier may be employed, and some Inconveniencies may happen of a Martial Nature.

As unto the Weather in this Month, it will be somewhat uncertain, sometimes windy, and stormy, &c.

Full Moon, the 5 day, 53 minutes past 9 at night.

Last Quarter, the 13 day at 10 of the clock at night.

New Moon, the 21 day, 29 minutes past 9 morning.

First Quarter, the 27 day, 42 minutes after midnight.

The { 15 at 10 at night *Mars*
 17 day at 3 afternoon *Jupiter*
 22 day at 6 at night *Venus*
 23 day at 6 morning *Mercury*
 28 day at 4 morning *Saturn* } is with the Moon;

They fought from Heaven, the Stars in their Courses fought
 against Sifera, Judges, chap. 5. ver. 20.

Saturn now becomes direct in Motion, in the 15 degree
 of *Sagittary*; and *Mars* towards the latter end of
 this Month, enters *Cancer*. There is now a *Sextile Aspect*
 of *Jupiter* and *Mercury*, and *Jupiter* and *Venus* in *Cancer*
 and *Virgo*: a *Quartile* of *Saturn* and *Mercury*, *Saturn* and
Venus, and the *Sun* and *Saturn* in *Virgo* and *Sagittary*: a
Quartile of *Mars* and *Mercury*, in *Gemini* and *Virgo*; and of
Mars and *Venus*, in *Cancer* and *Libra*: and at the Month's
 end a *Conjunction* of *Venus* and *Mercury* in *Libra*. These
Configurations are of a various Nature, though of no very
 great Importance. However, we may expect to hear of
 some Martial Enterprises and Troubles, some Doings now,
 or very lately on foot; for the *Effects* of the late *Opposition*
 of *Saturn* and *Mars*, at the end of *July* past, may be ex-
 pected to operate in this Month: it is an *Aspect* of a vio-
 lent Disposition (as *Astrologers* tell us) and of perfect
 enmity; and doth usually import (as they say) Contention,
 and Disagreement, Fights, Battles, Commotions, rash
 and unruly Actions, and Proceedings; sudden Fires, Rob-
 beries and other Enormities in those places of the World,
 under the *Constellations* wherein it happens---

Unconstant Weather in this Month, and many sudden
 showers of Rain will happen sometimes therein.

1693

September hath xxx. Days.

Full Moon, the 4 day, 37 minutes past 11 beforenoon.
 Last Quarter, the 12 day, 3 minutes past 1 afternoon.
 New Moon, the 19 day, 59 minutes past 6 at night.
 First Quarter, the 26 day, 23 minutes past 8 morning.

11 day at 8 at night *Jupiter*
 12 day at 2 morning *Mars*
 18 day at 3 afternoon *Mercury*
 21 day at noon *Venus*
 22 day at 1 morning *Saturn.*

is with the Moon

There is no speech nor language where their voice is not heard. Their line is gone out through all the Earth, and their words to the end of the World: In them hath be set a Tabernacle for the Sun; Psal. 19. ver. 3, 4.

NOW *Jupiter* and *Mars* come to *Conjunction* in the 23d degree of *Cancer*: and there are many *Aspects* of the Planets in this Month, and some of them are of pretty considerable Significations, viz. a *Quartile* of *Jupiter* and the Sun, the Sun and *Mars*, *Jupiter* and *Mercury*, and *Mars* and *Mercury* in *Cancer* and *Libra*: a *Trine* of *Jupiter* and *Venus*, and *Mars* and *Venus* in *Cancer* and *Scorpio*: a *Sextile* of *Saturn* and *Mercury* in *Libra* and *Sagittary*: a *Conjunction* of *Saturn* and *Venus* in *Sagittary*; and of the Sun and *Mercury* in *Scorpio*: And *Mars* comes into *Leo*, towards the latter part of the Month. Sundry Transactions now carried on in divers parts of the World; but especially in those under *Cancer* and *Libra*--where several things of Importance seem now in agitation; and many reports come from those parts of *Europe*, that are lying Northward and North-East from *England*--but whether touching Peace or War, time will discover. Many weighty Matters about Maritime Negotiations on foot in some places. Where Armies are, some Skirmishes at Land may happen, and there may be some Doings at Sea too-----

Moist and wet weather often in this Month: perhaps some frosts in some places, if not some Snow, at the end thereof--

November

1693 November hath xxx. Days.

Full Moon, the 2 day, 19 minutes past 9 morning.
 Last Quarter, the 10 day, 5 minutes past 10 at night.
 New Moon, the 17 day, 12 minutes past 2 afternoon.
 First Quarter, the 24 day, 45 minutes after noon.

November's Planetary Transaction and Observations.

The	{	8 day at 4 morning <i>Jupiter</i>	}	is with the Moon.
		9 day at 2 morning <i>Mars</i>		
		18 day at 7 morning <i>Mercury</i>		
		18 day at 5 at night <i>Saturn</i>		
		20 day at 10 morning <i>Venus</i>		

There are also *Celestial Bodies*, and *Bodies Terrestrial*: But the *Glory of the Celestial* is one, and the *Glory of the Terrestrial* is another, 1 Cor. chap. 15 ver. 40.

THE *Effects* of some of the *Celestial Configurations*, in *October* past, may now effectually operate, and appear in some *Places* under *Cancer* and *Libra*. The *Planets* now, are in no uneasy posture, but are under *benevolens*, and *propitious Aspects*: Here happens a *Trine* of *Jupiter* and *Mercury*, and the *Sun* and *Jupiter*, in *Cancer* and *Scorpio*; of *Mars* and *Mercury*, and the *Sun* and *Mars*, in *Leo* and *Sagittary*; a *Conjunction* of *Saturn* and *Mercury*, in *Sagittary*; and an *Opposition* of *Jupiter* and *Venus*, in *Cancer* and *Capricorn*: *Mars* is *stationary* at the latter end of this *Month*, and then becomes *Retrograde* in the 8th degree of *Leo*. The *Publick Business* of some *Nations* seems now warily managed, and smoothly carried on at this time. Some *Debates* betwixt some *Countries*, in order unto *Peace*, and *Endeavours* there are for the reconciling of *National Differences*; so that a more moderate time may appear now, than in some *Month's* past. The desire of some *People* may seem for *Peace*; notwithstanding things stand in somewhat an unsettled posture, as touching the present *Concernments* of several *Places*. *Sundry Rumours* from the *North* and *North-East*, &c.

Seasonable Weather in this *Month*, according to the *time* of the *Year*.

December

1693

December hath xxxi. Days.

Full Moon, the 2 day, 19 minutes past 5 at night.

Last Quarter, the 10 day, 31 minutes past 10 morning.

New Moon, the 16 day, 20 minutes past 11 at night.

First Quarter, the 24 day, 5 minutes past 8 morning.

--	---	--------------------------

There is one glory of the Sun, another of the Moon, and another Glory of the Stars; for one Star differeth from another Star in glory, 1 Cor. chap. 13. ver. 41.

UPON the 16th day of this Month about midnight, the Sun will be Eclipsed in the 6th degree of Capricorn: And it will be a great Eclipse, in those parts of the World where 'tis visible, which will be to our Antipodes---

There happen in this Month two Conjunctions, and four Oppositions of the Planets, and one Sextile Aspect: The Conjunctions are of the Sun and Saturn in Sagittary, and the Sun and Mercury in Capricorn: the Oppositions, are of Mars and Venus in Leo and Aquarius: two of Jupiter and Mercury in Cancer and Capricorn, and one of the Sun and Jupiter; and the Sextile is of Saturn and Venus, in Sagittary and Aquarius. These Configurations may have some considerable Effects now or e'er long, and seem to have relation unto those places in the World, that are under Cancer, Sagittary and Capricorn--where some unquiet designs may be in agitation: and they may be under some unsettled and unpleasant Circumstances; and subject unto some Difficulties and Controversies, and Vexations may be promoted, &c.- Some Ships at Sea, in danger by high Winds and boisterous Weather. The Year is at an end, and 'twill be well if the Troubles and Calamities which may at some time attend it, be at an end also--

Much Snow in this Month, and cold, moist, and cloudy Weather, &c.

Astral Observations, &c.

For the Year 1693.

By *William Andzeus*, Student in *Astrology*.

O Lord of Old hast laid the foundation of the Earth:
And the Heavens are the works of thy hands. They shall
perish but thou shalt endure: Yea, all of them shall wax old
like a Garment; as a Vesture shalt thou change them, and
they shall be changed, Psal. 102. ver. 25 and 26.

And the Lord God shall come and all his Saints with him.
And it shall come to pass in that day, that the light shall
not be clear nor dark, but it shall be one day which shall
be known to the Lord, not day nor night; but it shall come
to pass that at evening-time it shall be light. And the Lord
shall be King over all the Earth: In that day shall there be
no Lord, and his Name one, Zach. 14. ver. 5, 6, 7 and 9.

I have pleased Almighty God to let me live to see a great
part of the Year, 1692. expired; and also, to enable
me in some measure to write here of the Year, 1693. now
approaching. There has not been in the Year, 1692. to
the time of the writing hereof, any such Miraculous
Changes, and Wonderful Alterations in the whole World,
as has been by some Learned Men expected, and hinted
in their publick Writings to happen therein. What
Extraordinary Mundane Mutations, and Revolutions may
come out, before the Publication hereof, or the said Years
total, and final Expiration, God only knows—How-
ever, according to the Opinion of some Learned Men,
the World is in the latter part of its last Age; and may
be highly sensible of some Great and Superlative Changes
before the Year 1700. or near that time: And some do
conceive that the beginning of the blessed Millennium
which has by some judicious Persons been much hinted
is not very far off: And that the Dissolution of the present
state of this World draws nigh; and the New Heavens and

Astral Observations, 1693.

New Earth, wherein dwelleth Righteousness; according to that of *St. Peter*, in his *Second Epistle*, Chap. 3. ver. 13.

Howbeit, 'tis not my present design, to amuse the World with such abstruse Matters, but only to put it in mind what some Learned Men have conjectured concerning these things, viz. of its Dissolution, the blessed *Millennium* and its future State—Those that desire to be fully satisfied herein, let them peruse *Dr. Henry More's Defence* his *Moral Cabbala*, Pag. mibi, 215, 216, &c. His *Exposition* on the *Revelations* of *St. John*, Chap. 20. and 21. And the Ingenious and Learned Author of the *Theory of the Earth*, &c. the Two last Books concerning the burning of the World and concerning the *New Heavens* and *New Earth*; a Work full of Curiosity and Learning: Unto which I refer you.

That this World shall be dissolved, the *Holy Scriptures* plainly tell us, as in the aforesaid *Second Epistle* of *St. Peter* Chap. 3. ver. 10. and 12. and in sundry other places thereof and I suppose cannot be denied: But as to the very time its Dissolution, 'tis wholly hid and kept secret by the Almighty God; from the knowledge of Men; yea, and Angels too: For so saith the *Holy Scriptures*: And seeing the time thereof is uncertain, and has been a long time heretofore expected, and not yet come, it may be said 'tis impertinent to speak of it here, in regard, it may be some Hundreds of Years yet, before it will come; and concerns us not that are now living, who may be all dead and rotten before that time. To this I cannot answer better, than in the very words of the Learned and Ingenious Author of the *Miscellaneous Discourses* concerning the Dissolution and Changes of the world; printed in 1692. who Page 204, &c. of the said Book, writes thus, viz. "concerns us, because it's possible it may happen in our times; it may surprize us before we are aware. The precise time thereof is uncertain. And it shall be sudden and unexpected, coming as a Thief in the Night therefore we ought always to be upon our guard, have our Loins girt about, and our Lights burning. The use the Scripture in many places makes of the uncertainty of Christ's coming, Luke 12, 40. Be ye therefore ready, the Son of Man cometh at an hour when ye think not."

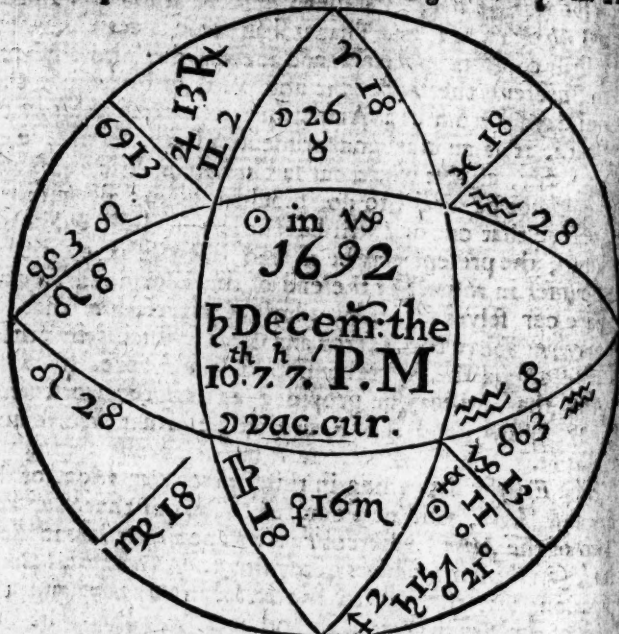

Astral Observations, 1693.

21. 34. 35. And take heed to your selves, lest at any time your hearts be overcharged with Surfeiting and Drunkenness, and Cares of this Life; and so that day come upon you unawares. For as a Snare shall it come on all them that dwell on the whole Earth, Parallel whereto, are Maatth. 24. 42. and Mark 13. 33, 35. That it shall come is certain, when it shall come is uncertain, and it every day draws nearer and nearer; therefore is it not Wisdom to remove the evil day far from us: And as in reference to the day of Death, it is an usual and prudent Advice, so to live every day, as if it were our last day; or at least, as we would not be afraid to do, should it be so: Because we are sure that one day will be our last, and for ought we know, the present may be it: So likewise is it rational Counsel in respect of the end of the World, so to prepare our selves for it, by a holy Conversation, that we may get above the Terror and Dread which will otherwise attend the Apprehension of the Approach of it. And that we may be provided against the worst that may follow, and be secure, come what can come. Thus be.

The Eclipses happening in this present Year 1693. of the Sun and Moon, will be Four, viz. Two of the Sun, and Two of the Moon; whereof Two will be visible here in England, (if the Air favour us) according to Astronomical Computation, viz. the one of the Moon in January, and the other of the Sun in June; the other Two will not be visible here. You have their Descriptions, &c. inserted by me, in the Observations of the Months wherein they happen: And as to their Portents and Significations, I shall consider and mention them here, in the following Observations on the Quarters on the Year wherein they are: And so I now come to speak of the Positions of the Cælestial Bodies, at the Sun's Ingress into the Four Cardinal Points of Heaven this Year, 1693. and the Configuration of the Stars then appearing: The Ingress of the Sun into Capricorn in December, 1692. being the First of them in order to be here observed—

Astral Observations, 1693.

THe Sun comes into Capricorn, on Saturday the 10th day of December, 1692. about Seven Minutes past Seven of the Clock at Night; at which time the Heavens will be posited as in the following Scheme, viz. The

Eighth Degree of Leo will Ascend in our Horizon, and the Eighteenth Degree of Aries, will be on the Cusps of the Meridian Caeli, (both Signs of the fiery Triplicity :) Saturn will be in the Fifteenth Degree of Sagitary, in the Fifth House: Jupiter in the Thirteenth Degree of Gemini, Retrograde in the Eleventh House: Mars in the One and Twentieth Degree of Sagitary, in the Fifth House: The Sun in the same House: Venus in the Fourth House, in the Sixteenth Degree of Scorpio: Mercury in the Sixth House, in the Eleventh Degree of Capricorn: The Moon in the Tenth House, in the Twenty Seventh Degree of Taurus, void of Course: Caput Draconis in the Sixth House, in the Third Degree of Aquarius: And Cauda Draconis in the Twelfth House, in the same Degree of Leo.

The Heavenly Bodies at this Ingress of the Sun into Capricorn

Astral Observations, 1693.

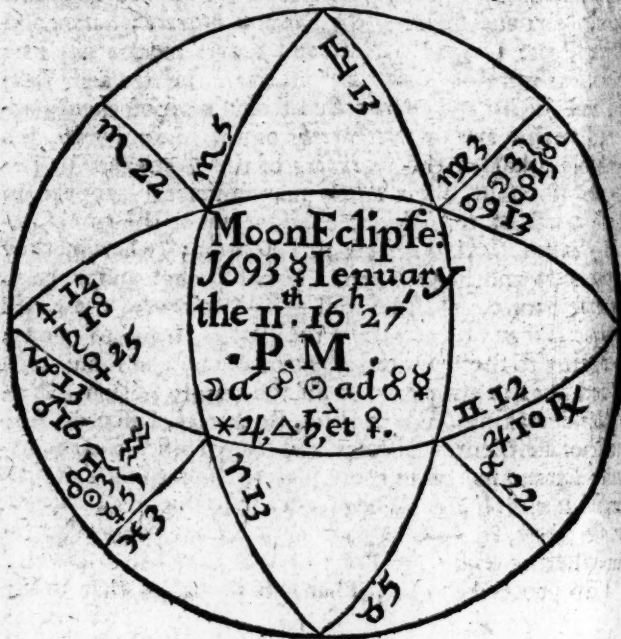

Capricorn, are pretty moderately posited; Five of them, *Saturn*, *Mars*, the *Sun*, *Venus* and *Mercury*, are under the *Earth*; the other Two, *viz.* *Jupiter* and the *Moon* are above it: And there are no *Aspects* of the *Planets* at time of this *Ingress*.

That which is most to be observed, is, That *Saturn* and *Jupiter*, about *Seven* or *Eight* days before the *Sun* came into *Capricorn*, made their *second Opposition* in the *Fourteenth* *Degree* of *Gemini* and *Sagitary*; whose *Effects* may be expected to operate in one kind or other, at the very beginning of this *Year*, *viz.* in the *Months* of *January*, *February* and *March*— Besides, we cannot but take notice here of the eminent *Conjunctions* of the *Planets* in *November*, 1692. *Sagitary* and the *Three* considerable *Oppositions* of them at the same time, in *Gemini* and *Sagitary*, (being not very long before this *Solar Ingress*) all which seem to me to have some *Material Effects*: For *Astrologers* say, That such *Configurations* are to be regarded, because of their great *Significations*. The *Conjunctions* were of the *Sun* and *Mars*, *Mars* and *Mercury*, the *Sun* and *Mercury*; *Saturn* and *Mercury*, the *Sun* and *Saturn*, and *Saturn* and *Mars*. The *Oppositions* were of *Jupiter* and *Mercury*, the *Sun* and *Jupiter*, and *Jupiter* and *Mars*: And seeing most of them happened within *two* or *three Weeks* of this *Solar Ingress*, it's probable, that at the beginning of this *Year*, and in the *Months* aforesaid, their *Effects* may sufficiently appear in those parts of the *World*, that are under the *two* aforesaid *Constellations*, *Sagitary* and *Gemini*; (wherein they happened) and if they prove not of a rough and uncomfortable nature, 'twill be well— However, these said *Conjunctions* and *Oppositions* of the *Planets*, seem to signify, according to the *Opinion* of *Haly Bonatus*, and some *Ancient* and *Modern Astrologers*, rash and unruly *Actions*, *Martial Undertakings*, sudden *Fires*, *Robberies*, *Discords*, *Animosities*, *Pestilential Diseases*, and many *Difficulties* and *unquiet Circumstances* in those places, who are under those aforesaid *Celestial Signs*. They seem also to import *High Wind*, *cold weather*, &c.—and great *Consultations* in the *World*; but whether tending to *Peace* or *War*, time will discover—

I do proceed and say, That it is probable, that in this

Astral Observations, 1693.

Winter Quarter, viz. in the Months of January, February, and part of March this Year, 1693. (for the *Winter Quarter* always begins Astronomically, when the Sun enters *Capricorn*, and continues until he has passed through *Capricorn*, *Aquarius* and *Pisces*: There will happen many Debates, and some notable Designs will be on foot in sundry parts of the World: Dissolution of Leagues betwixt some Nations, and their falling off one from another; and the Affections and Undertakings of some People may not appear so firm and sure as heretofore, unto such as have been formerly, or now are allied or concerned in Friendship and Amity with them: Besides, Controversies in some Places may happen about Religion, or the Rights and Priviledges of some People. But seeing there is in this *Quarter*, viz. on the Twelfth day of January, a very great Eclipse of the Moon, which will be visible in our Horizon (if the Clouds hinder not:) I will here following, give you an Account how the Heavens will be posited at the middle-time thereof—

Astral Observations, 1693.

At the middle-time of this Great Lunar Eclipse in Janu-
 foresaid, Twelve Degrees of Sagitary, appears in the
 Ascendant (in this our Horizon:) And the Thirteenth Degree
 of Libra is on the Cusps of the Medium Cæli: Saturn and
 Jupiter are in the Ascendant, the one in the Eighteenth Degree
 of Sagitary, and the other in the Five and Twentieth De-
 grees thereof: Jupiter is in the Seventh House, in the Tenth
 Degree of Gemini, Retrograde: Mars is in the Second
 House, in the Sixteenth Degree of Capricorn: Caput Draco-
 nis in the First Degree of Aquarius, the Sun in the Third,
 and Mercury in the Fifth, all in the Second House; (Mer-
 cury being Retrograde.) The Moon is with Cauda Draco-
 nis in the Eighth House, and next after her Separation
 from the Opposition of the Sun; she comes to the Opposi-
 tion of Mercury, Sextile of Jupiter, and Trine of Saturn and
 Venus: And there is a Conjunction of the Sun and Mer-
 cury. Jupiter is Lord of the Ascendant, Venus is Ruler
 of the Tenth House, and the Sun is Lord of the Sign,
 wherein the Eclipse happens.

The Position of the Planet Saturn in the Ascendant, at
 this Eclipse, seems to be of no pleasant Importance, but
 of an uncomfortable Signification. He doth hereby sig-
 nify Destruction and Mischief, by cold, long and tedious
 infirmities, Agues, Tificks, obnoxious Diseases, occa-
 sioned from Humours, Flegme and Defluxions: Banish-
 ment, Want, Tribulation, Anxiety, Fears, Sadness and
 Death to many, both Young, and those that are stricken
 in Years: Bitter Cold Weather, much Snow, and incon-
 venient Wind and Moisture; also Diminution, and De-
 struction to the Fruits of the Earth in some Places, and
 that some People will be under many Difficulties, and
 melancholy Circumstances.——And seeing the great-
 est Observation of this Eclipse happens in the Eighth House
 (in our Horizon) which is by Astrologers, called *Domus*
Mortis; it doth seem to import Mortality, and Death
 of People, more than ordinary, the more, because the
 Eclipse happens in Leo (which Sign hath relation unto the
 Heart in Mans Body, which seems further confirmed, by
 the Moons being with Cauda Dragonis therein——

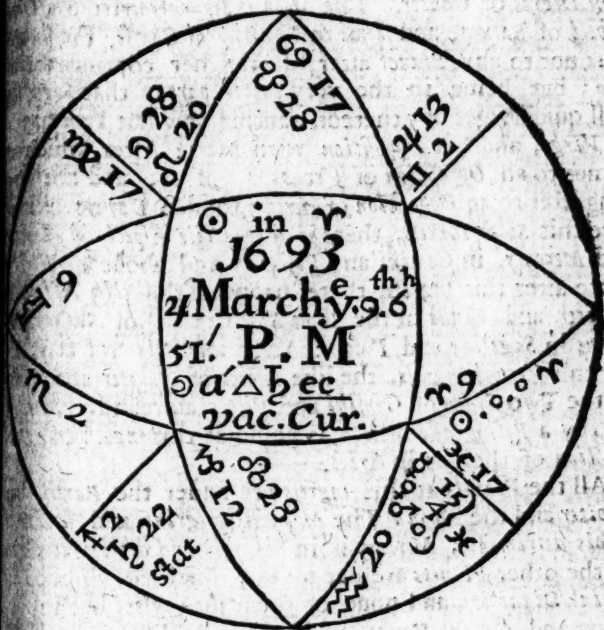

Astral Observations, 1693.

Besides, the Position of the Sun, Mars and Mercury in the Second House, at this Eclipse; Mercury being Retrograde, and the Sun in Conjunction with Him, and He, viz. Mercury in Opposition to the Eclipsed Moon, seems to import Loss to Merchants and Tradesmen, by sundry Casualties; and to the Farmers and Country People in some Places, by Soldiers, and Armed Men, Quartering, Plundering, and other Enormities, and Inconveniences; and that Mony and Trading may not be so plentiful in some parts of Europe as heretofore; to the Prejudice and Detriment of many People: Dangerous Voyages also by Sea, occasioned by high Winds, and piratical Actions—

I do proceed, and say, that this Lunar Eclipse, happens in the first decanate of Leo: Proclus an ancient Mathematician saith, that when an Eclipse of the Moon, shall be in the said decanate, and ten first Degrees of Leo,—*Vel calamitatem regis, alicujus infirmitatem, vel praecleari cuiuspiam viri mortem adducit*—Moreover, concerning an Eclipse of the Luminaries in the Fiery Trigon, (as this is) Junctinus a Great Astrologer writes thus, Fol. 309, *de Eclipsibus*—viz. *Eclipses Luminarium in triangularitate ignea denunciant armentorum, pecudumque interitus, magni Regis, seu principis exilia, carceres, aut interfectionem. Inter plebeos & potentiores odia, mutuas similtates, dissidia, &c.* Eclipses of the Luminaries in the Fiery Triplicity, do denote the Death and Destruction of Cattel, the Exile, Imprisonment, or Murder of a great King or Prince; amongst the common People and Potentates, Hatred, mutual Grudges, Dissensions, Dissemblings, the Motion of Armies, Wars, Murders, Thefts, Depopulations, sudden Fires, Apparitions in the Air, &c. And seeing this Eclipse will continue even almost Four Hours, ergo, its effects will be in force, (according to the old rule,) Four Months. And in regard the effects of Eclipses, according to Origanus, do operate presently after they happen, (for in Part 3. *de Effectibus*, he rejects the Opinion of Ptolomy, touching this matter,) the Effects therefore of this Lunar Eclipse, may be expected to happen in the Months of January, February, March, and April, this Year, and in those Months it is probable many of those things before-mentioned which seem signified

Astral Observations, 1693.

thereby, may appear in the parts of the World
 turned by the said *Eclipse*. And seeing the *Eclipse* it-
 is very great, its *Effects* may be accordingly. And so
 to the position of Heaven, at the Sun's ingress into A-
 this present Year, 1693, being the next thing in order to
 here considered.

Upon Thursday, the Ninth Day of March, this Year, 1693, about
 Fifty One Minutes past Six of the Clock at Night, the
 Sun makes his return into Aries, and the Vernal Quarter then
 begins Astronomically, (and continues so long as the Sun a-
 scends in Aries, Taurus and Gemini,) at which time Nine
 Degrees of Libra, is here ascending, and Twelve Degrees of
 Cancer is on the Cusps of the Medium Caeli: Saturn is in the
 Two and Twentieth Degree of Sagitary, Stationary in the
 Third House of Heaven: Jupiter in the Thirteenth Degree of
 Gemini,

Astral Observations, 1693.

Gemini, in the Ninth House : *Mars* in the very beginning of *Pisces* : *Venus* in the Fourth ; and *Mercury* in the Fifteenth Degree thereof, all Three in the Fifth House. The Sun is in the Sixth House : The Moon is in the Eighth and Twentieth Degree of *Leo*, in the Eleventh House : *Caput Draconis*, is in the Fourth House, in the Eighth and Twentieth Degree of *Capricorn* : And *Cauda Draconis*, is in the Tenth House, in the same Degree of *Cancer*. The Moon is separating from a Triune Aspect of *Saturn*, and seems to be void of Course, for she applies not to any Planet after, during her continuance in *Leo* ; but being in the very latter part of that Sign, she will quickly get out thereof, wanting now but Two Degrees of *Virgo*, and her Opposition with *Mars* : After which she comes to an Opposition of *Venus*, ☐ of 4, and not very long after, to an Opposition of *Mercury* too.—A Day or Two before this Solar Ingress, there is a Quartile Aspect of *Jupiter* and *Mercury*, in *Gemini* and *Pisces*. And about a Week or more after this Ingress, there happens the like Aspect of *Jupiter* and *Venus* in the same Signs ; and of *Saturn* and *Venus* in *Sagittary* and *Pisces* : And about Nineteen Days after this Vernal Ingress, the like Aspect of *Jupiter* and *Mars*, in the Two Signs of *Gemini* and *Pisces* aforesaid. *Mercury* also by a Retrograde Motion, is going at this Ingress to a Conjunction of the Sun in *Aries*.—

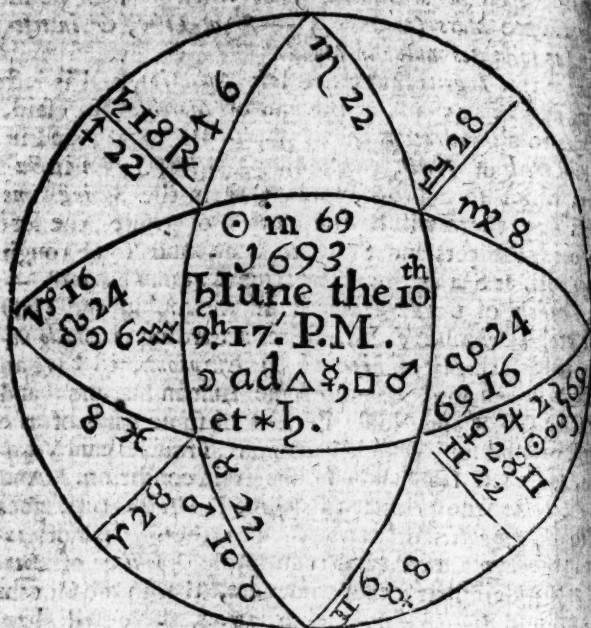

All the Planets at this Ingress are under the Earth, but *Jupiter* and the Moon : The Moon is peregrine, and *Jupiter* is in his detriment ; *Mercury* is in his fall and detriment ; and all the other Planets are but meanly Fortified, as unto Essential Dignities, and none of them in Angles, but in Succedent and Cadent Houses, which is to be disliked, as being of mean and uneasy significations.—And as the Moon is now peregrine, and out of all her Essential Dignities, so is she also applying to the Opposition of *Mars*, who by Astrologers is accounted an unfortunate Planet. *Haly*, in his 8th Book Cap. 16. *De judiciis Astrorum*, (concerning such a Position and Application of the Moon,) writes thus, — *Quando Luna fuerit debilis, & peregrina & applicuerat infortunis.*—*Significat populo malum statum & Casum, depressionem & debilitatem in suis negotiis, defectum sui victus & lucri, & multas infirmitates in Corporibus, & occasiones que accidunt*

Astral Observations, 1693.

is. And he also saith, That when *she* shall be in
sign unto Mars (as now,) — *Erunr Lites, & interse-*
at falsitates multe in Mundo.
at this *Ingress* has quite left *Aquarius*, and is just
ing into *Pisces*; and at the end of *March* as aforesaid,
comes to a *Quadrant Aspect* of *Jupiter* in *Gemini*; and in
first week of *April*, to the like *Aspect* of *Saturn* in *Sa-*
quarius, which seems to import, that in the *Spring* time
Year, there will be the motion of Armies, the ser-
out of Fleets and Ships to Sea; and some rough
both at Sea and Land by some *European Nations*. —
Position of *Cauda Draconis* in *Cancer*, in the *Tenth*
at this *Solar Revolution*, seems according to *Guido Bo-*
in his 4th part of his *Book of Astronomy*, to have an
signification, as unto some Human Matters; and
some Great and Noble Persons in some parts of the
world will be subject unto Murations, Troubles and Vexa-
tions, and their Honour in an uncertain condition. And
the *Moon* who rules at this time the *Tenth House*, goes
to the *Opposition* of *Mars*, then to the *Quartile* of *Ju-*
in the *Ninth House*, and then to the *Opposition* of *Mer-*
as aforesaid: It seems to denote, that in the Months
April and *May* this present Year, 1693, there will hap-
in some Places in *Europe*, Controversies about Religion,
such as are concerned in Religious Matters; Also
and Hasty and Tumultuous Actions and Undertak-
ings of several natures and concernments; wherein the
Magistrates of some Countries, and the common
people may be concerned. — And so I proceed to the
Quarter of this Year, and Position of *Heaven*, at
the *Sans Ingress* into *Cancer*; being the next *Cælestial* busi-
ness to be herein considered. —

Upon

Astral Observations, 1693.

UPon Saturday the Tenth Day of June, this Year, 1693, about Seventeen Minutes past Nine of the Clock at Night, the Sun comes into Cancer, at which time the Summer Quarter (according unto Astronomical Account,) begins (and continueth until the Sun hath gone through Cancer, Leo and Virgo,) at which time the Sixteenth Degree of Capricorn ascends in our Horizon, and the Two and Twentieth Degree of Scorpio is on the Cusps of the Medium Caeli: Saturn is in the Eighteenth Degree of Sagitary, in the Twelfth House, (being within Four Degrees thereof:) Jupiter is in the Second Degree of Cancer, in the Sixth House, and the Sun is in that House: Mars is in the Tenth Degree of Taurus, in the Third House: Venus is in the Sixth House, in Twenty Eight Degrees of Gemini: Mercury is in the Eighth Degree thereof, in the Fifth House: The Moon is in the Ascendant,

Astral Observations, 1693.

endant, in the Sixth Degree of Aquarius : Caput Draconis in the Ascendant, in Four and Twenty Degrees of Capricorn : and Cauda Draconis is in the Seventh House, in the same Degree of Cancer : The Moon is applying to the Trine of Mercury, Quintile of Mars, and Sextile of Saturn : And the Sun is going to the Conjunction of Jupiter, Venus to Conjunction of ☿ and ☿ in ♊, and Mercury to the Opposition of Saturn in Gemini and Sagitary.

The Heavenly Bodies at this Ingress of the Sun to Cancer, are pretty moderately posited : Jupiter is in his Exaltation, Mars is in his Detriment ; Mercury is in Gemini his own House, but they are all under the Earth, but Saturn, and ☿ is Retrograde ; and the Moon is just ready to rise.—

We do conceive, that the aforesaid Three Conjunctions in Cancer, at this Ingress, viz. of the Sun and Jupiter, Venus and Jupiter, and Venus and the Sun, may have some prodigious effects, and be (perhaps) of a Peaceable Nature,

—But Cauda Draconis in that Sign, at this Ingress, seems to denote some untoward proceedings in some Places of the World under that Constellation ; and some Troubles and Afflictions in one kind or other, may attend some Countries Northward or North-East, concerned by that Sign ; and various Reports may be abroad about their publick Negotiations in this present Summer Quarter.—

Besides, these said Conjunctions, and the before-mentioned Opposition of Saturn and Mercury also attending this Ingress in Gemini and Sagitary, seem to portend much unsettled, windy and various Weather, many times in the Months of June, July and August ; and Thunder, and Lightning, and violent Storms of Hail, and Rain in some Places, detrimental to the Inhabitantes where they happen ; — And some Notable Actions of a Martial Nature may appear in some parts of Europe, about the latter end of July, or beginning of August ; and a Sickly Summer may be feared.—

About a Fortnight after this Solstitial Ingress, there will happen an Eclipse of the Sun, viz. on Friday, the 23d Day of June about Noon, which Eclipse may chance to be visible here in England ; but some Tables make it to be so small, that it will be scarce discernable, but with good Glasses, though the Air should prove clear ; as you may perceive in my

Description

Astral Observations, 1693.

Description thereof. In the foregoing Observations on this Year. And seeing the Eclipse itself will be but its effects cannot be expected to be great, but rather little importance unto Mankind.—What may be expected to happen therefrom, will be manifested Northward, North-East, in this Summer Quarter. And so I proceed the Position of Heaven, at the Ingress of the Sun into Libra this present Year, 1693, being the last Thing which is to be observed herein.—

THE Sun on Tuesday the Twelfth Day of September, this Year about Fifty Five Minutes past Noon, comes into Libra (and according to Astronomers, the Autumnal Quarter the begins, and continues until the Sun hath gone through Libra, Scorpio, and Sagitary,) at which time (in our Horizon Thirteen Degrees of Sagitary Ascends, and Fifteen Degrees Libra Culminates.—Saturn is in the Ascendant, Retrograde

Astral Observations, 1693.

the Sixteenth Degree of Sagitary: Mars in Eleven Degrees of Cancer, Cauda Draconis in Nineteen Degrees; and Jupiter in Twenty Degrees thereof, all in the Eighth House: The Sun is in the Ninth House; and so is Mercury, he being in the Degree of Libra, Retrograde; Venus is in the Three and Twentieth Degree of that Sign, in the Tenth House. The Moon is in the Seventh House, in the Twenty Eighth Degree of Gemini; and Caput Draconis is in the Second House, in the Nineteenth Degree of Capricorn. The Moon seems void of Course, she lacks but Two Degrees of Cancer, and of a Quartile Aspect of the Sun, and but Three Degrees of the like Aspect of Mercury; and Mercury and the Sun are in Conjunction.

That which is most observable in this Autumnal position of Heaven, is, that Saturn is Retrograde in the Ascendant as aforesaid; and that Jupiter and Mars, are in the Eighth House, the one, viz. Jupiter, being (even) in Conjunction with Cauda Draconis, and the other, viz. Mars, being not very far from it; all which seem to have some unpleasant Portents, and to denote much Sickness, or some Epidemical Disease to afflict Mankind in some places: And that in this Autumnal Quarter, many People in some Countries, will yield their Bodies to the Grave.

All the Planets at this said Ingress are above the Earth, as if the publick Actions and Enterprizes carried on in the World, in the latter part of this Year 1693. and Months of September, October and November, will be pretty considerable, and be managed with some Courage and Resolution: Mars is in his Fall; Jupiter is in his Exaltation: Strong Endeavours will be for Peace, and for the reconciling of National Differences in some European Countries, in this Autumnal Quarter: And perhaps they may take effect, &c. and some Nations may begin to be weary of War; for so the Heavenly Bodies at this time, seem in part to declare.—

I draw near unto Conclusion, and say, that it is very probable, that in this Quarter, and also at some other times, before in this Year, some of the Effects of the Oppositions of Saturn and Jupiter past, may be manifested in several parts of the World, but more especially in those Places

Places which are under the Two Constellations of *Pisces* wherein they happened, *viz. Gemini and Sagittary.*—
in this very Year, the publick Affairs of some Nations may be under some uncertain Circumstances; and several Revolutions and many Turnings and Windings may happen in *Mundane Transactions*; and some notable Doings and Proceedings.—Also some *Prodigious Sights* in the Air, seem to portend (perhaps) a Comet, or some unusual Matter may appear. But some of the *Effects* of the said Opposition may not only be expected to operate in this present Year 1693, but also in some Succeeding Years: We wish they may be of a propitious Nature unto the World.—

There happened in the Summer of the last Year, 1692, many violent and extraordinary Storms of Hail and Rain, not only here, in sundry parts of England, but also in many Countries beyond the Seas, continuing a great while together, occasioning great Floods in many Places, to the great Damage of some People: We feared such weather to happen then, as I mentioned in my last Years Almanack. God grant that the Weather in the Months of June, July and August, this present Year, 1693, may not prove of such an uncomfortable nature as then. However we learn according to the Aspects of the Stars, &c. that in those very Months this Year, there will be very often *unconstant Stormy, and Rainy Weather* in some Places; and sometimes very great Claps of Thunder, and Fierce Lightning also, which may be prejudicial to some People. But God rules the Stars, and disposeth of the Weather, and of all things else, as he pleaseth. I conclude all with the Words of the Royal Psalmist, Psal. 67, ver. 1, 2. and Psal. 8. 1. God be Merciful unto us, and bless us, and shew us the light of his Countenance, and be merciful unto us; that thy way may be known upon Earth, thy saving Health among all Nations. O Lord our Lord, how excellent is thy Name in all the Earth! Who hast set thy glory above the Heavens.

Sine ope divina nihil valemus.

William Andrews.
